

Mobile Access Action Wizard

This tutorial provides you the information needed to setup a mobile access action via the notification wizards.

To get to the starting point of this tutorial:

- Log in as administrator
- Click the "Notifications" tab

1. Adding a notification

a) First click on the "notification wizard"

Please choose a name for your **Mobile Access** Action. Descriptive Action names increase the simplicity of the system.

This is a preview of the message that will be visible on your mobile. The message visible will include the details relevant to your sensor.

Click **Customize** to change the format of this message. The items in your message with a dollar sign and parentheses e.g. **\$**[TIME] represents the data to be imported into your message at the time of sending. Please click the Macro Description button for a full list.

The Mobile Log Number is the maximum number of notification messages that will be stored on the securityProbe. These messages will be read only when a mobile phone connects to the system, via Bluetooth, data call or GPRS. A new message will be stored in the Log after each event.
